

# Beacony Update App

v2.0

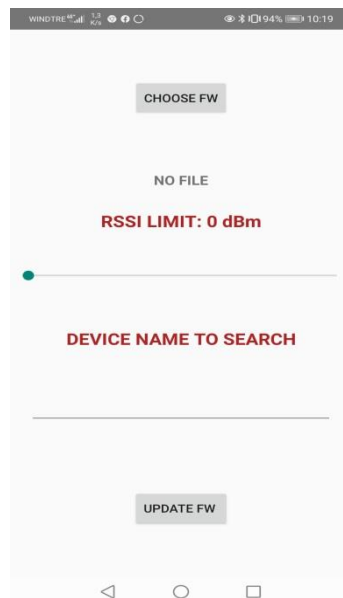

Release Date: 30/09/2020

## Requirements:

- Android device with Bluetooth 4.0
- Android version 9 or higher

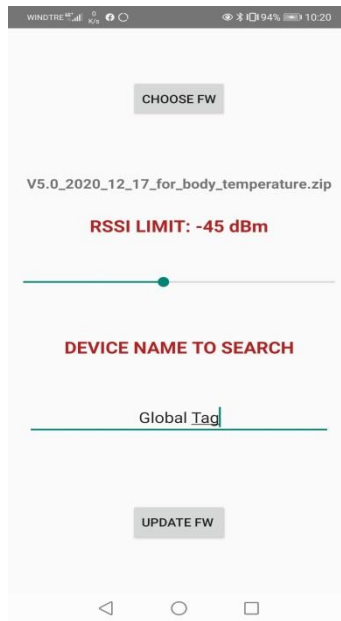

This app allows the user to upload a specific firmware on the Beacony's SoC (Contact Tracing and Social Distancing ones)

This is the home page of the app.

By clicking on the button "CHOOSE FW", you can choose which firmware you want to upload on the beacons (it MUST be a .zip file)

Once you've chosen the firmware, set an RSSI filter (every Beacons over that limit wont be affected), and choose a Device Name to connect with.

To start the uploading procedure, click on "UPDATE FW".
